Credit Risk Weighted Assets (CRWA)

Total Credit RWA increased by \$8.2 billion from March 2022 to \$357.0 billion at June 2022. Increasing portfolio volumes primarily driven by lending growth in Institutional grew RWA by \$7.6 billion combined with foreign exchange movements of \$2.4 billion. This is offset by risk improvement of -\$1.1 billion mainly in Institutional, Australia Commercial and New Zealand portfolios.

Market Risk, Operational Risk and IRRBB Risk Weighted Assets (RWA)

Traded Market Risk RWA increased slightly by \$53 million over the quarter due to an increase in Risk Factor Not in VaR. IRRBB RWA increased over the quarter mainly due to a decline in Embedded Gains as yields continued to rise, as well as increased market volatility.

¹ Specialised Lending exposures subject to supervisory slotting approach are those where the main servicing and repayment is from the asset being financed and includes specified commercial property development/investment lending and project finance.

Table 4 Credit risk exposures

Exposure at Default in Table 4 represents credit exposure net of offsets for credit risk mitigation such as guarantees, credit derivatives, netting and financial collateral. It includes Advanced IRB, Specialised Lending and Standardised exposures, however does not include Securitisation, Equities or Other Assets exposures.

⁴ Impaired derivatives are net of credit valuation adjustment (CVA) of nil, being a market value based assessment of the credit risk of the relevant counterparties (March 2022: nil; December 2021: \$1 million).

⁵ Impaired loans / facilities include restructured items of \$303 million for customer facilities in which the original contractual terms have been modified for reasons related to the financial difficulties of the customer. Restructuring may consist of reduction of interest, principal or other payments legally due, or an extension in maturity materially beyond those typically offered to new facilities with similar risk (March 2022: \$375 million; December 2021: \$392 million).

⁶ Impaired assets for June 2022 include \$109 million of well secured facilities (\$88 million of corporate and \$21 million of mortgages) now classified as restructures post finalisation of COVID-19 support packages in the quarter.

⁷ For regulatory reporting not well secured portfolio managed retail exposures have been reclassified from past due loans ≥ 90 days to impaired loans / facilities.

⁸ Due to definitional differences, there is a variation in the split between ANZ's Individually and Collectively Assessed Provisions for Credit Impairment for accounting purposes and the Specific Provision and General Reserve for Credit Losses (GRCL) for regulatory purposes. This does not impact total provisions, and essentially relates to the classification of collectively assessed provisions on defaulted accounts. The disclosures in this document are based on Individually and Collectively Assessed Provisions for Credit Impairment, for ease of comparison with other published results.

Table 18 Leverage ratio

The Leverage Ratio requirements are part of the Basel Committee on Banking Supervision (BCBS) Basel III capital framework. It is a simple, non-risk based supplement or backstop to the current risk based capital requirements and is intended to restrict the build-up of excessive leverage in the banking system.

Consistent with the BCBS definition, APRA's Leverage Ratio compares Tier 1 Capital to the Exposure Measure (expressed as a percentage) as defined by APS 110: Capital Adequacy. APRA requires ADIs authorised to use the internal ratings based approach to credit risk to maintain a minimum leverage ratio of 3.5% from January 2023.

The following information is the short form data disclosure required to be published under paragraph 49 of APS 330.

Liquidity Coverage Ratio (LCR)

ANZ's average LCR for the 3 months to 30 June 2022 was 129.8% with total liquid assets exceeding net outflows by an average of \$54.5b.

The main contributors to net cash outflows were modelled outflows associated with the bank's corporate and retail deposit portfolios, offset by inflows from maturing loans. While cash outflows associated with derivatives are material, these are effectively offset by derivative cash inflows.

ANZ has a well-diversified deposit and funding base avoiding undue concentrations by investor type, maturity, market source and currency.

ANZ monitors and manages its liquidity risk on a daily basis including LCR by geography and currency, ensuring ongoing compliance across the network.

Glossary

| | |
|--|---|
| ADI | Authorised Deposit-taking Institution. |
| Basel III Credit Valuation Adjustment (CVA) capital charge | CVA charge is an additional capital requirement under Basel III for bilateral derivative exposures. Derivatives not cleared through a central exchange/counterparty are subject to this additional capital charge and also receive normal CRWA treatment under Basel II principles. |
| Collectively Assessed Provision for Credit Impairment | Collectively assessed provisions for credit impairment represent the Expected Credit Loss (ECL) calculated in accordance with AASB 9 Financial Instruments (AASB 9). These incorporate forward looking information and do not require an actual loss event to have occurred for an impairment provision to be recognised. |
| Credit exposure | The aggregate of all claims, commitments and contingent liabilities arising from on- and off-balance sheet transactions (in the banking book and trading book) with the counterparty or group of related counterparties. |
| Credit risk | The risk of financial loss resulting from the failure of ANZ's customers and counterparties to honour or perform fully the terms of a loan or contract. |
| Credit Valuation Adjustment (CVA) | Over the life of a derivative instrument, ANZ uses a CVA model to adjust fair value to take into account the impact of counterparty credit quality. The methodology calculates the present value of expected losses over the life of the financial instrument as a function of probability of default, loss given default, expected credit risk exposure and an asset correlation factor. Impaired derivatives are also subject to a CVA. |
| Days past due | The number of days a credit obligation is overdue, commencing on the date that the arrears or excess occurs and accruing for each completed calendar day thereafter. |
| Exposure at Default (EAD) | Exposure At Default is defined as the expected facility exposure at the date of default. |
| Impaired assets (IA) | Facilities are classified as impaired when there is doubt as to whether the contractual amounts due, including interest and other payments, will be met in a timely manner. Impaired assets include impaired facilities, and impaired derivatives. Impaired derivatives have a credit valuation adjustment (CVA), which is a market assessment of the credit risk of the relevant counterparties. |
| Impaired loans (IL) | Impaired loans comprise of drawn facilities where the customer's status is defined as impaired. |
| Individual provision charge (IPC) | Individual provision charge is the amount of expected credit losses on financial instruments assessed for impairment on an individual basis (as opposed to on a collective basis). It takes into account expected cash flows over the lives of those financial instruments. |
| Individually Assessed Provisions for Credit Impairment | Individually assessed provisions for credit impairment are calculated in accordance with AASB 9 Financial Instruments (AASB 9). They are assessed on a case-by-case basis for all individually managed impaired assets taking into consideration factors such as the realisable value of security (or other credit mitigants), the likely return available upon liquidation or bankruptcy, legal uncertainties, estimated costs involved in recovery, the market price of the exposure in secondary markets and the amount and timing of expected receipts and recoveries. |
| Market risk | <p>The risk to ANZ's earnings arising from changes in interest rates, currency exchange rates and credit spreads, or from fluctuations in bond, commodity or equity prices. ANZ has grouped market risk into two broad categories to facilitate the measurement, reporting and control of market risk:</p> <p>Traded market risk - the risk of loss from changes in the value of financial instruments due to movements in price factors for physical and derivative trading positions. Trading positions arise from transactions where ANZ acts as principal with clients or with the market.</p> <p>Non-traded market risk (or balance sheet risk) - comprises interest rate risk in the banking book and the risk to the AUD denominated value of ANZ's capital and earnings due to foreign exchange rate movements.</p> |

|--|---|
| Operational risk | The risk of loss resulting from inadequate or failed internal controls or from external events, including legal risk but excluding reputation risk. |
| Past due facilities | Facilities where a contractual payment has not been met or the customer is outside of contractual arrangements are deemed past due. Past due facilities include those operating in excess of approved arrangements or where scheduled repayments are outstanding but do not include impaired assets. |
| Qualifying Central Counterparties (QCCP) | QCCP is a central counterparty which is an entity that interposes itself between counterparties to derivative contracts. Trades with QCCP attract a more favorable risk weight calculation. |
| Recoveries | Payments received and taken to profit for the current period for the amounts written off in prior financial periods. |
| Restructured items | Restructured items comprise facilities in which the original contractual terms have been modified for reasons related to the financial difficulties of the customer. Restructuring may consist of reduction of interest, principal or other payments legally due, or an extension in maturity materially beyond those typically offered to new facilities with similar risk. |
| Risk Weighted Assets (RWA) | Assets (both on and off-balance sheet) are risk weighted according to each asset's inherent potential for default and what the likely losses would be in the case of default. In the case of non asset backed risks (i.e. market and operational risk), RWA is determined by multiplying the capital requirements for those risks by 12.5. |
| Securitisation risk | The risk of credit related losses greater than expected due to a securitisation failing to operate as anticipated, or of the values and risks accepted or transferred, not emerging as expected. |
| Write-Offs | Facilities are written off against the related provision for impairment when they are assessed as partially or fully uncollectable, and after proceeds from the realisation of any collateral have been received. Where individual provisions recognised in previous periods have subsequently decreased or are no longer required, such impairment losses are reversed in the current period income statement. |
