## Chapter 1 – Highlights

### APRA Common Equity Tier 1 Capital (CET1) – Level 2

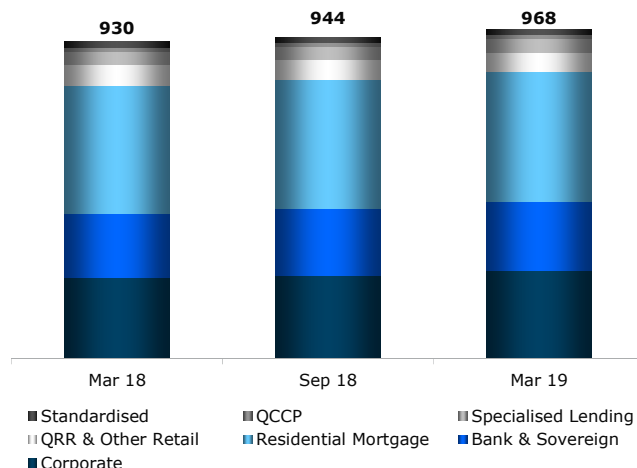

\*Organic capital generation comprises cash earnings (excluding large/notable items), movement in underlying RWA (excluding from foreign exchange translation impacts, regulatory changes and other one-offs) and movement in business capital deductions.

### Capital ratio for March 2019

- CET1 ratios have increased in the half to March 2019 mainly due to cash profit generation, net reduction in underlying RWA growth (excluding foreign exchange impacts, regulatory changes and other one-offs), and benefits from asset sales. Partially offsetting these were the impact from payment of the 2018 final dividend and on-market share buy back during the half.

- The APRA CET1 ratio is currently in excess of APRA's 'unquestionably strong' benchmark of 10.5% CET1.

### Exposure at Default\* (\$bn)

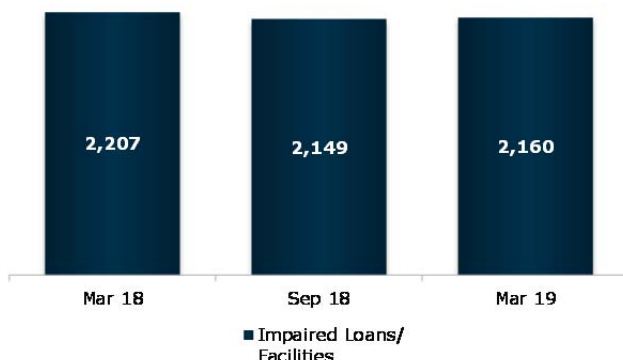

\*Exposure at Default is post Credit Risk Mitigation (CRM) and does not include Securitisation, Equities or Other Assets.

### EAD up \$24bn to \$968bn for 1H19

- Underlying increase in EAD driven by FX of \$11.4bn and volume growth of \$12.3bn being Corporate (+\$8.7bn), Bank (+\$3.0bn), Specialised Lending (+\$2.7bn) and Sovereign (+\$1.8bn) assets classes. This was partially offset by reductions in Standardised (-\$1.8bn) and Other Retail (-\$1.8bn).

### Impaired Assets (\$m)

### Impaired Assets up \$11m HoH

- Increase in Impaired Asset HoH is driven by an increase in the Australia Division (+\$72m) driven by a single name exposure and an increase in the home loan portfolio. This was partially offset by a decrease in the Institutional division (-\$69m) driven by repayments and writeoffs.

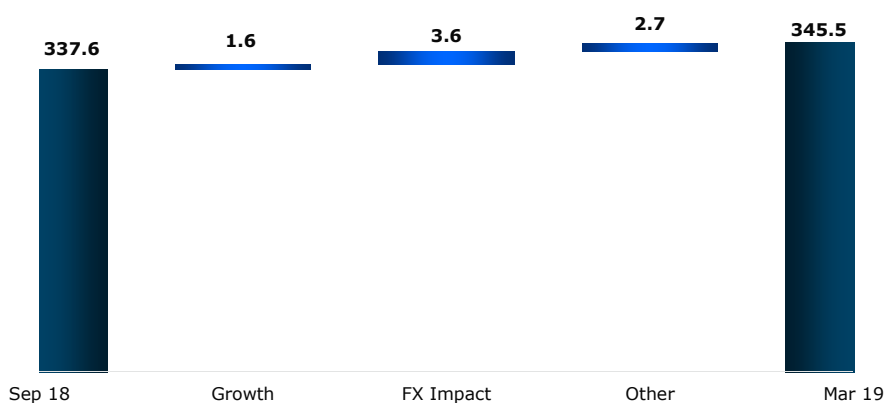

**Provision Ratios (Provisions / Credit RWA)**

**Provision coverage remains sound**

- The Total Provision ratio increased by 22bps and Collective Provision ratio increased 23bps driven by the transition to AASB 9 Financial Instruments which has resulted in an \$813 million increase to Collectively Assessed Provisions for Credit Impairment.
- For comparison purposes the ratios as at 1 October 2018 were Total Provision ratio 1.26% and Collective Provision ratio 0.99%.

**Movements in Credit Risk Weighted Assets (\$bn)**

**Credit Risk Weighted Assets (CRWA) increased by \$7.9bn HoH.**

- Driven by increase in volume of AIRB Corporate exposures combined with increase in Residential mortgages due to application of a regulatory determined risk weight adjustments.

**Average Risk Weights (CRWA / EAD\*)**

\*Exposure at Default is post Credit Risk Mitigation (CRM) and does not include Securitisation, Equities or Other Assets.

## Chapter 2 - Introduction

### Purpose of this document

This document has been prepared in accordance with the Australian Prudential Regulation Authority (APRA) ADI Prudential Standard (APS) 330: Public Disclosure.

APS 330 mandates the release to the investment community and general public of information relating to capital adequacy and risk management practices. APS 330 was established to implement Pillar 3 of the Basel Committee on Banking Supervision's framework for bank capital adequacy<sup>2</sup>. In simple terms, the Basel framework consists of three mutually reinforcing 'Pillars':

Pillar 1 Minimum capital requirement	Pillar 2 Supervisory review process	Pillar 3 Market discipline
Minimum capital requirements for Credit Risk, Operational Risk, Market Risk and Interest Rate Risk in the Banking Book	Firm-wide risk oversight, Internal Capital Adequacy Assessment Process (ICAAP), consideration of additional risks, capital buffers and targets and risk concentrations, etc.	Regular disclosure to the market of qualitative and quantitative aspects of risk management, capital adequacy and underlying risk metrics

APS 330 requires the publication of various levels of information on a quarterly, semi-annual and annual basis. This document is the semi-annual disclosure.

### Basel in ANZ

In December 2007, ANZ received accreditation for the most advanced approaches permitted under Basel for credit risk and operational risk, complementing its accreditation for market risk. Effective January 2013, ANZ adopted APRA requirements for Basel III with respect to the measurement and monitoring of regulatory capital.

### Verification of disclosures

These Pillar 3 disclosures have been verified in accordance with Board approved policy, including ensuring consistency with information contained in ANZ's Financial Report and in Pillar 1 returns provided to APRA. In addition ANZ's external auditor has performed an agreed upon procedure review with respect to these disclosures.

### Comparison to ANZ's Financial Reporting

These disclosures have been produced in accordance with regulatory capital adequacy concepts and rules, rather than with accounting policies adopted in ANZ's financial reports. As such, there are different areas of focus and measures in some common areas of disclosures. These differences are most pronounced in the credit risk disclosures, for instance:

- The principal method for measuring the amount at risk is Exposure at Default (EAD), which is the estimated amount of exposure likely to be owed on a credit obligation at the time of default. Under the Advanced Internal Ratings Based (AIRB) approach in APS 113 Capital Adequacy: Internal Ratings-based Approach to Credit Risk, banks are accredited to provide their own estimates of EAD for all exposures (drawn, commitments or contingent liabilities) reflecting the current balance as well as the likelihood of additional drawings prior to default.
- Loss Given Default (LGD) is an estimate of the amount of losses expected in the event of default. LGD is essentially calculated as the amount at risk (EAD) less expected net recoveries from realisation of collateral as well as any post default repayments of principal and interest.
- Most credit risk disclosures split ANZ's portfolio into regulatory asset classes, which span different areas of ANZ's internal divisional and business unit organisational structure.

Unless otherwise stated, all amounts are rounded to AUD millions.

<sup>2</sup> Basel Committee on Banking Supervision, International Convergence of Capital Measurement and Capital Standards: A Revised Framework, 2004.

## Chapter 3 – Capital and Capital Adequacy

### Table 1 Capital Disclosure template

The head of the Level 2 Group to which this prudential standard applies is Australia and New Zealand Banking Group Limited.

Table 1 of this chapter consists of a Capital Disclosure template that assists users in understanding the differences between the application of the Basel III reforms in Australia and those rules as detailed in the document Basel III: A global regulatory framework for more resilient banks and banking systems, issued by the Bank for International Settlements.

The information in the lines of the template has been mapped to ANZ's Level 2 balance sheet, which adjusts for non-consolidated subsidiaries as required under APS 001: Definitions. Where this information cannot be mapped on a one to one basis, it is provided in an explanatory table. ANZ's material non-consolidated subsidiaries are also listed in this chapter.

#### Restrictions on Transfers of Capital within ANZ

ANZ operates branches and locally incorporated subsidiaries in many countries. These operations are capitalised at an appropriate level to cover the risks in the business and to meet local prudential requirements. This level of capitalisation may be enhanced to meet local taxation and operational requirements. Any repatriation of capital from subsidiaries or branches is subject to meeting the requirements of the local prudential regulator and/or the local central bank. Apart from ANZ's operations in New Zealand, local country capital requirements do not impose any material call on ANZ's capital base.

ANZ undertakes banking activities in New Zealand principally through its wholly owned subsidiary, ANZ Bank New Zealand Limited, which is subject to minimum capital requirements as set by the Reserve Bank of New Zealand (RBNZ). The RBNZ adopted the Basel II framework, effective from 1 January 2008 and Basel III reforms from 1 January 2013 and ANZ Bank New Zealand Limited has been accredited to use the advanced approach for the calculation of credit risk and operational risk. ANZ Bank New Zealand Limited maintains a buffer above the minimum capital base required by the RBNZ. This capital buffer has been calculated via the ICAAP undertaken for ANZ Bank New Zealand Limited, to ensure ANZ Bank New Zealand Limited is appropriately capitalised under stressed economic scenarios.

**Table 2 Main features of capital instruments**

As the main features of ANZ's capital instruments are updated on an ongoing basis, ANZ has provided this information separately in the Regulatory Disclosures section of its website.

**Table 3 Capital adequacy, Table 4 Credit risk, Table 5 Securitisation**

The above tables are produced at the quarters ending 30 June and 31 December.

**Table 6 Capital adequacy - Capital Ratio and Risk Weighted Assets**

The following table provides the composition of capital used for regulatory purposes and capital adequacy ratios.

	Mar 19 \$M	Sep 18 \$M	Mar 18 \$M
<b>Risk weighted assets</b>			
<b>Subject to Advanced Internal Rating Based (IRB) approach</b>			
Corporate	127,989	121,891	123,253
Sovereign	7,016	6,955	6,896
Bank	15,511	15,908	15,129
Residential Mortgage	101,469	97,764	99,560
Qualifying Revolving Retail	5,795	6,314	6,845
Other Retail	28,029	29,373	30,769
<b>Credit risk weighted assets subject to Advanced IRB approach</b>	<b>285,809</b>	<b>278,205</b>	<b>282,452</b>
<b>Credit risk Specialised Lending exposures subject to slotting approach<sup>4</sup></b>	<b>35,696</b>	<b>33,110</b>	<b>32,065</b>
<b>Subject to Standardised approach</b>			
Corporate	12,252	13,760	15,105
Residential Mortgage	331	327	321
Other Retail	81	88	102
<b>Credit risk weighted assets subject to Standardised approach</b>	<b>12,664</b>	<b>14,175</b>	<b>15,528</b>
<b>Credit Valuation Adjustment and Qualifying Central Counterparties</b>	<b>6,217</b>	<b>7,344</b>	<b>7,864</b>
Credit risk weighted assets relating to securitisation exposures	1,558	1,600	1,728
Other assets	3,579	3,146	3,185
<b>Total credit risk weighted assets</b>	<b>345,523</b>	<b>337,580</b>	<b>342,822</b>
Market risk weighted assets	5,790	6,808	6,558
Operational risk weighted assets	37,733	37,618	37,378
Interest rate risk in the banking book (IRRBB) risk weighted assets	7,245	8,814	9,019
<b>Total risk weighted assets</b>	<b>396,291</b>	<b>390,820</b>	<b>395,777</b>
<b>Capital ratios (%)<sup>5</sup></b>			
Level 2 Common Equity Tier 1 capital ratio	11.5%	11.4%	11.0%
Level 2 Tier 1 capital ratio	13.4%	13.4%	12.9%
Level 2 Total capital ratio	15.3%	15.2%	14.9%
Level 1: Extended licensed Common Equity Tier 1 capital ratio	11.2%	11.6%	10.9%
Level 1: Extended licensed entity Tier 1 capital ratio	13.2%	13.6%	12.9%
Level 1: Extended licensed entity Total capital ratio	15.3%	15.6%	15.1%
Other significant Authorised Deposit-taking Institution (ADI) or overseas bank subsidiary:			
ANZ Bank New Zealand Limited – Common Equity Tier 1 capital ratio	11.4%	11.1%	11.0%
ANZ Bank New Zealand Limited - Tier 1 capital ratio	14.6%	14.4%	14.4%
ANZ Bank New Zealand Limited - Total capital ratio	14.6%	14.4%	14.4%

<sup>4</sup> Specialised Lending exposures subject to slotting approach are those where the main servicing and repayment is from the asset being financed, and includes specified commercial property development/investment lending, project finance and object finance.

<sup>5</sup> ANZ Bank New Zealand Limited's capital ratios have been calculated in accordance with Reserve Bank of New Zealand prudential standards.

**Credit Risk Weighted Assets (CRWA)**

Total CRWA increased \$7.9 billion (2.4%) from September 2018 to \$345.5 billion at March 2019. This was driven by an increase in Corporates under the Advanced IRB approach with CRWA increasing \$6.1 billion predominantly from portfolio growth in the Institutional Business. CRWA for Residential Mortgages under the Advanced IRB approach increased \$3.7 billion predominately due to the application of regulatory determined risk weight adjustments.

**Market Risk, Operational Risk and IRRBB RWA**

Traded Market Risk RWA decreased \$1 billion over the half due to reductions in both Standard VaR and Stress VaR.

IRRBB RWA decreased \$1.6 billion over the half due to a reduction in Repricing and Yield Curve risk and improvement in embedded gains.

## Chapter 4 – Credit risk

Exposure at Default in Table 7 represents credit exposure net of offsets for credit risk mitigation such as guarantees, credit derivatives, netting and financial collateral. It includes Advanced IRB, Specialised Lending and Standardised exposures, and excludes Securitisation, Equities or Other Assets exposures.

**Table 7(b) part (i): Period end and average Exposure at Default <sup>6</sup>**

Advanced IRB approach	Mar 19				
	Risk Weighted Assets \$M	Exposure at Default \$M	Average Exposure at Default for half year \$M	Individual provision charge for half year \$M	Write-offs for half year \$M

<sup>14</sup> Impaired derivatives are net of credit value adjustment (CVA) of \$20 million, being a market value based assessment of the credit risk of the relevant counterparties (September 2018: \$27 million; March 2018: \$36 million).

<sup>15</sup> Impaired loans / facilities include restructured items of \$264 million for customer facilities in which the original contractual terms have been modified for reasons related to the financial difficulties of the customer. Restructuring may consist of reduction of interest, principal or other payments legally due, or an extension in maturity materially beyond those typically offered to new facilities with similar risk (September 2018: \$269 million; March 2018: \$76 million).

<sup>16</sup> For regulatory reporting, not well secured portfolio managed retail exposures have been reclassified from past due loans > 90 days to impaired loans / facilities.

<sup>17</sup> Due to definitional differences, there is a variation in the split between ANZ's Individually Assessed and Collectively Assessed Provision for accounting purposes and the Specific Provision and General Reserve for Credit Losses (GRCL) for regulatory purposes. This does not impact total provisions, and essentially relates to the classification of collectively assessed provisions on defaulted accounts. The disclosures in this document are based on Individual Provision and Collective Provision, for ease of comparison with other published results.

<sup>20</sup> Table 8(b) shows exposure at default after credit risk mitigation in each risk category.

**Table 9 Credit risk – Disclosures for portfolios subject to Advanced IRB approaches****Portfolios subject to the Advanced IRB (AIRB) approach**

The following table summarises the types of borrowers and the rating approach adopted within each of ANZ's AIRB portfolios:

<b>IRB Asset Class</b>	<b>Borrower Type</b>	<b>Rating Approach</b>
Corporate	Corporations, partnerships or proprietorships that do not fit into any other asset class	AIRB
Sovereign	Central governments Central banks Certain multilateral development banks	AIRB
Bank	Banks <sup>21</sup> In Australia only, other authorised deposit taking institutions (ADI) incorporated in Australia	AIRB
Residential Mortgages	Exposures secured by residential property	AIRB
Qualifying Revolving Retail	Consumer credit cards <\$100,000 limit	AIRB
Other Retail	Small business lending Other lending to consumers	AIRB
Specialised Lending	Income Producing Real Estate <sup>22</sup> Project finance Object finance	AIRB – Supervisory Slotting <sup>23</sup>
Other Assets	All other assets not falling into the above classes e.g. margin lending, fixed assets	AIRB – fixed risk weights

In addition, ANZ has applied the Standardised approach to some portfolio segments (mainly retail and local corporates in Asia Pacific) where currently available data does not enable development of advanced internal models for PD, LGD and EAD estimates. Under the Standardised approach, exposures are mapped to several regulatory risk weights, mainly based on the type of counterparty and its external rating. For these counterparties, external ratings by Standard & Poor's and Moody's Investors Service are used as inputs into the RWA calculation. As described in the section on the ANZ rating system, ANZ has mapped its master scale to the grading of these two External Credit Assessment Institutions (ECAIs).

ANZ applies its full normal risk measurement and management framework to these segments for internal management purposes. Standardised segments will be migrated to AIRB if they reach a volume that generates sufficient data for development of advanced internal models.

ANZ has not applied the Foundation IRB approach to any portfolios.

**The ANZ rating system**

As an AIRB bank, ANZ's internal models generate the inputs into regulatory capital adequacy to determine the risk weighted exposure calculations for both on and off-balance sheet exposures, including undrawn portions of credit facilities, committed and contingent exposures and EL calculations. ANZ's internal models are used to generate the three key risk components that serve as inputs to the IRB approach to credit risk:

- PD is an estimate of the level of the risk of borrower default. Borrower ratings are derived by way of rating models used both at loan origination and for ongoing monitoring.
- EAD is defined as the expected facility exposure at the date of default.
- LGD is an estimate of the potential economic loss on a credit exposure, incurred as a consequence of obligor default and expressed as a percentage of the facility's EAD. ANZ's LGD also includes recognition of the different legal and insolvency regimes in different countries, where this has been shown to influence recovery outcomes.

<sup>21</sup> The IRB asset classification of investment banks is Corporate, rather than Bank.

<sup>22</sup> Since 2009, APRA has agreed that some large, well-diversified commercial property exposures may be treated as corporate exposures, in line with the original Basel Committee's definition of Specialised Lending.

<sup>23</sup> ANZ uses an internal assessment which is mapped to the appropriate Supervisory Slot.

Effective maturity is also calculated as an input to the risk weighted exposure calculation for bank, sovereign and corporate IRB asset classes.

ANZ's rating system has two separate and distinct dimensions that:

- Measure the PD, which is expressed by the Customer Credit Rating (CCR), reflecting the ability to service and repay debt.
- Measure the LGD as expressed by the Security Indicator (SI) ranging from A to G. The SI is calculated by reference to the percentage of a loan covered by security which can be realised in the event of default. This calculation uses standard ratios to adjust the current market value of collateral items to allow for historical realisation outcomes. The security-related SIs are supplemented with a range of other SIs which cover such factors as cash cover, mezzanine finance, intra-group guarantees and sovereign backing as ANZ's LGD research indicates that these transaction characteristics have different recovery outcomes. ANZ's LGD also includes recognition of the different legal and insolvency regimes in different countries, where this has been shown to influence recovery outcomes.

ANZ's corporate PD master scale is APRA approved, and is made up of 27 rating grades. Each level/grade is separately defined and has a range of default probabilities attached to it. The PD master scale enables ANZ's rating system to be mapped to the grading's of external rating agencies, using the PD as a common element after ensuring that default definitions and other key attributes are aligned.

The following table demonstrates this alignment (for one year PDs):

<b>ANZ CCR</b>	<b>Moody's</b>	<b>Standard &amp; Poor's</b>	<b>PD Range</b>
0+ to 1-	Aaa to Aa3	AAA to AA-	0.0000 - 0.0346%
2+ to 3+	A1 to Baa1	A+ to BBB+	0.0347 - 0.1636%
3= to 4+	Baa2 to > Baa3	BBB to > BB+	0.1637 - 0.4004%
4= to 6=	Ba1 to B1	BB+ to B+	0.4005 - 2.7550%
6- to 7=	B2 to B3	B to B-	2.7551 - 9.7980%
7- to 8+	Caa	CCC	9.7981 - 27.1109%
8=	Ca, C	CC, C	27.1110 - 99.9999%
8-, 9 and 10	Default	Default	100%

In the retail asset classes, most facilities utilise credit rating scores. The scores are calibrated to PDs, and used to allocate exposures to homogenous pools, along with LGD and EAD.

<sup>24</sup> In accordance with APS 330, EAD in Table 9(d) includes Advanced IRB exposures and excludes Specialised Lending, Standardised, Securitisation, Equities or Other Assets exposures. Specialised Lending is excluded from Table 9(d) as it follows the Supervisory Slotting treatment, and a breakdown of risk weightings is provided in Table 8(b).

<sup>25</sup> Average EAD is calculated as total EAD post risk mitigants divided by the total number of credit risk generating exposures.

<sup>26</sup> Exposure-weighted average risk weight (%) is calculated as CRWA divided by EAD.

**Factors impacting the loss experience**

The individual credit impairment charge increased \$37 million over the half driven by significant write backs and recoveries in AIRB Corporate and Standardised asset classes in the September 2018 half.

Write-offs decreased \$75 million over the half driven by AIRB Corporate, Qualifying Revolving Retail and Other Retail asset class.

**Table 9(f): Average estimated vs. actual PD, EAD and LGD – Advanced IRB**

Portfolio Type	Mar 19				
	Average Estimated PD %	Average Actual PD %	Average estimated to actual EAD ratio	Average Estimated LGD %	Average Actual LGD %
Corporate	1.92	1.77	1.20	42.43	34.49
Sovereign	0.39	Nil	n/a	n/a	n/a
Bank	0.65	0.08	1.02	46.00	58.30
Specialised Lending	n/a	2.04	1.05	n/a	24.76
Residential Mortgage <sup>27</sup>	0.73	0.78	1.01	20.69	1.86
Qualifying Revolving Retail	2.39	1.83	1.08	76.96	69.25
Other Retail	4.11	3.33	1.05	53.21	42.65

APS 330 Table 9(f) compares internal credit risk estimates used in calculating regulatory capital with realised outcomes by portfolio types. It covers the PD, EAD and LGD estimates for the IRB portfolios.

Estimated PD and LGD for Specialised Lending exposures have not been provided, since APRA requires the use of supervisory slotting for Regulatory EL calculations. Actual PD, EAD ratio, Estimated LGD and Actual LGD for Sovereign exposures have not been provided, since there were no Sovereign defaults observed in ANZ Sovereign exposures for the observation period.

#### Wholesale Portfolios

The estimated PD is based on the average of the internally estimated long-run PD's for obligors that are not in default at the beginning of each financial year over the period of observation being 2009 to 2018. The actual PD is based on the number of defaulted obligors up to February 2019 compared to the total number of obligors measured.

The EAD ratio compares internally estimated EAD prior to default to realised EAD for defaulted obligors over the 9 years of observation being 2009 to February 2019. A ratio greater than 1.0 signifies that on average, the actual defaulted exposures are lower than the estimated exposures at the time of default.

The estimated LGD is the downturn LGD for accounts that defaulted at the beginning of each year during the observation period being 2009 to March 2017. The actual LGD is based on the average realised losses over the period for the accounts observed at the beginning and defaulted during the observation period. For non-retail portfolios, the estimated and actual LGDs are based on accounts that defaulted up to March 2017. Defaults occurring after March 2017 have been excluded from the analysis to allow sufficient time for workout period. Actual LGD for defaults where workouts were not finalised have been estimated to approximate the final actual loss.

#### Retail Portfolios

The estimated PD is based on the average of the internally estimated long-run PD's for obligors that are not in default at the beginning of each financial year over the period of observation being 2014 to 2018. The actual PD is based on the number of defaulted obligors up to March 2019 compared to the total number of obligors measured.

The EAD ratio compares internally estimated EAD prior to default to realised EAD for defaulted obligors over the period of observation being 2014 to 2018. A ratio greater than 1.0 signifies that on average, the actual defaulted exposures are lower than the estimated exposures at the time of default.

The estimated LGD is the downturn LGD for accounts that defaulted at the beginning of each year during the observation period being 2013 to 2017. The actual LGD is based on the average realised losses over the period for the accounts observed at the beginning and defaulted during the observation period. Defaults occurring after March 2017 have been excluded from the analysis to allow sufficient time for workout period.

<sup>27</sup> A revised capital model was introduced in June 2017, which will impact Average Estimated PD rates for the Australian Residential Mortgages portfolio. The current Average Estimated PD rates are based on previous capital models, with the impacts of the revised model to gradually roll through in future periods.

**Table 12(l) part (ii): Banking Book: Securitisation - Aggregate securitisation exposures deducted from Capital**

No longer required under Basel III; defaulted exposures are given a risk weight of 1250% and no longer deducted from Capital.

**Table 12(m): Banking Book: Securitisations subject to early amortisation treatment**

ANZ does not have any Securitisations subject to early amortisation treatment or using Standardised approach.

**Table 12(n): Banking Book: Resecuritisation - Aggregate amount of resecuritisation exposures retained or purchased**

ANZ does not have any retained or purchased Resecuritisation exposures.

## Trading Book

### **Table 12(o): Trading Book: Traditional and synthetic securitisation exposures**

No assets from ANZ's Trading Book were securitised during the reporting period.

### **Table 12(p): Trading Book: Total amount of outstanding exposures intended to be securitised**

No assets from ANZ's Trading Book were intended to be securitised as at the reporting date.

### **Table 12(q): Trading Book: Securitisation - Summary of current year's activity by underlying asset type and facility**

No assets from ANZ's Trading Book were securitised during the reporting period.

### **Table 12(r): Trading Book: Traditional and synthetic securitisation exposures**

No assets from ANZ's Trading Book were securitised during the reporting period.

### **Table 12(s): Trading Book: Securitisation – Regulatory credit exposures by exposure type**

ANZ does not have any Regulatory credit exposures by exposure type

### **Table 12(t)(i) & Table 12(u)(i): Trading Book: Aggregate securitisation exposures subject to Internal Models Approach (IMA) and the associated Capital requirements**

ANZ does not have any Securitisation exposures subject to Internal Models Approach.

### **Table 12(t)(ii) & Table 12(u)(ii): Trading Book: Aggregate securitisation exposures subject to APS 120 and the associated Capital requirements**

ANZ does not have any aggregate Securitisation exposures subject to APS120 and the associated Capital requirements.

### **Table 12(u)(iii): Trading Book: Securitisation - Aggregate securitisation exposures deducted from Capital**

ANZ does not have any Securitisation exposures deducted from Capital.

### **Table 12(v): Trading Book: Securitisations subject to early amortisation treatment**

ANZ does not have any Securitisation exposures subject to early amortisation or using Standardised approach.

### **Table 12(w): Trading Book: Resecuritisation - Aggregate amount of resecuritisation exposures retained or purchased**

ANZ does not have any retained or purchased Resecuritisation exposures.

## Chapter 6 – Market risk

### Table 13 Market risk – Standard approach

Table 13(b): Market risk – Standard approach <sup>30</sup>

	Mar 19	Sep 18	Mar 18
	\$M	\$M	\$M
Interest rate risk	109	76	100
Equity position risk	-	-	-
Foreign exchange risk	-	-	-
Commodity risk	-	-	-
<b>Total</b>	<b>109</b>	<b>76</b>	<b>100</b>
<b>Risk Weighted Assets equivalent</b>	<b>1,363</b>	<b>950</b>	<b>1,250</b>

<sup>30</sup> RWA equivalent is the capital requirement multiplied by 12.5 in accordance with APS 110.

#### IRRBB stress testing methodology

Stress tests within ANZ include standard and extraordinary tests. These tests are used to highlight potential risk which may not be captured by VaR, and how the portfolio might behave under extraordinary circumstances. Standard stress tests include statistically derived scenarios based on historical yield curve movements. These combine parallel shocks with twists and bends in the curve to produce a wide range of hypothetical scenarios at high statistical confidence levels, with the single worst scenario identified and reported. Extraordinary stress tests include interest rate moves from historical periods of stress as well as stresses to assumptions made about the repricing term of exposures. The rate move scenarios include daily changes over the stressed periods and the worst theoretical losses over the selected periods are each reported. Stresses of the repricing term assumptions investigate scenarios where actual repricing terms are significantly different to the base modelling assumptions.

## Chapter 9 – Leverage and Liquidity Coverage Ratio

### Leverage Ratio

The Leverage Ratio requirements are part of the Basel Committee on Banking Supervision (BCBS) Basel III capital framework. It is a simple, non-risk based supplement or backstop to the current risk based capital requirements and is intended to restrict the build-up of excessive leverage in the banking system.

Consistent with the BCBS definition, APRA's Leverage Ratio compares Tier 1 Capital to the Exposure Measure (expressed as a percentage) as defined by APS 110. APRA has not finalised a minimum Leverage Ratio requirement for Australian ADIs, although they have proposed a minimum of 3.5% for internal ratings based approach ADI.

At 31 March 2019, the Group's Leverage Ratio of 5.4% was above the 3% minimum currently required by the BCBS. Table 18 below shows the Group's Leverage Ratio calculation as at 31 March 2019 and Table 19 summarises the reconciliation of accounting assets and leverage ratio exposure measure at 31 March 2019.

**Table 18 Leverage Ratio**

	Mar 19	Sep 18	Mar 18
	\$M	\$M	\$M
<b>On-balance sheet exposures</b>			
1 On-balance sheet items (excluding derivatives and SFTs, but including collateral)	824,997	799,199	795,034

		63		66		65

**Liquidity Coverage Ratio (LCR)**

ANZ's average LCR for the 3 months to 31 March 2019 was 143.5% with total liquid assets exceeding net outflows by an average of \$57.4b.

The main contributors to net cash outflows were modelled outflows associated with the bank's corporate and retail deposit portfolios, offset by inflows from maturing loans. While cash outflows associated with derivatives are material, these are effectively offset by derivative cash inflows.

The composition of the liquid asset portfolio has remained relatively stable through the half, with HQLA securities and cash making up on average 75% of total liquid assets.

ANZ has a well diversified deposit and funding base avoiding undue concentrations by investor type, maturity, market source and currency.

ANZ monitors and manages its liquidity risk on a daily basis including LCR by geography and currency, ensuring ongoing compliance across the network.

<b>33</b>	<b>Total RSF</b>					<b>446,119</b>
<b>34</b>	<b>Net Stable Funding Ratio (%)</b>					<b>115.00%</b>

ANZ's NSFR as at 31 March 2019 was 115.0%, up 0.7% in the quarter since December 2018.

The main sources of Available Stable Funding (ASF) at March 2019 were deposits from Retail and SME customers, at 46%, with other wholesale funding at 34% and capital at 14% of the total ASF.

The majority of ANZ's Required Stable Funding (RSF) at March 2019 was driven by mortgages at 48% and other lending to non-FI customers at 35% of the total RSF.

## Glossary

ADI	Authorised Deposit-taking Institution.
Basel III Credit Valuation adjustment (CVA) capital charge	CVA charge is an additional capital requirement under Basel III for bilateral derivative exposures. Derivatives not cleared through a central exchange/counterparty are subject to this additional capital charge and also receive normal CRWA treatment under Basel II principles.
Collectively Assessed Provision for Credit Impairment	Collectively assessed provisions for credit impairment represent the Expected Credit Loss (ECL) calculated in accordance with AASB 9 Financial Instruments (AASB 9). These incorporate forward looking information and do not require an actual loss event to have occurred for an impairment provision to be recognised.
Collective provision (CP)	Collective provision under AASB 139 Financial Instruments (AASB 139) is the provision for credit losses that are inherent in the portfolio but not able to be individually identified. A collective provision may only be recognised when a loss event has already occurred. Losses expected as a result of future events, no matter how likely, are not recognised.
Credit exposure	The aggregate of all claims, commitments and contingent liabilities arising from on- and off-balance sheet transactions (in the banking book and trading book) with the counterparty or group of related counterparties.
Credit risk	The risk of financial loss resulting from a counterparty failing to fulfil its obligations, or from a decrease in credit quality of a counterparty resulting in a loss in value.
Credit Valuation Adjustment (CVA)	Over the life of a derivative instrument, ANZ uses a CVA model to adjust fair value to take into account the impact of counterparty credit quality. The methodology calculates the present value of expected losses over the life of the financial instrument as a function of probability of default, loss given default, expected credit risk exposure and an asset correlation factor. Impaired derivatives are also subject to a CVA.
Days past due	The number of days a credit obligation is overdue, commencing on the date that the arrears or excess occurs and accruing for each completed calendar day thereafter.
Exposure at Default (EAD)	Exposure At Default is defined as the expected facility exposure at the date of default.
Impaired assets (IA)	Facilities are classified as impaired when there is doubt as to whether the contractual amounts due, including interest and other payments, will be met in a timely manner. Impaired assets include impaired facilities, and impaired derivatives. Impaired derivatives have a credit valuation adjustment (CVA), which is a market assessment of the credit risk of the relevant counterparties.
Impaired loans (IL)	Impaired loans comprise of drawn facilities where the customer's status is defined as impaired.
Individual provision charge (IPC)	Individual provision charge is the amount of expected credit losses on financial instruments assessed for impairment on an individual basis (as opposed to on a collective basis). It takes into account expected cash flows over the lives of those financial instruments.
Individually Assessed Provisions for Credit Impairment	Individually assessed provisions for credit impairment are calculated in accordance with AASB 9 Financial Instruments (AASB 9). They are assessed on a case-by-case basis for all individually managed impaired assets taking into consideration factors such as the realisable value of security (or other credit mitigants), the likely return available upon liquidation or bankruptcy, legal uncertainties, estimated costs involved in recovery, the market price of the exposure in secondary markets and the amount and timing of expected receipts and recoveries.
Individual provisions (IP)	Individual provisions under AASB 139 Financial Instruments (AASB 139) are assessed on a case-by-case basis for all individually managed impaired assets taking into consideration factors such as the realisable value of security (or other credit mitigants), the likely return available upon liquidation or bankruptcy, legal uncertainties, estimated costs involved in recovery, the market price of the exposure in secondary markets and the amount and timing of expected receipts and recoveries.

Internationally Comparable Basel III Capital Ratio	The Internationally Comparable Basel III CET1 ratios are ANZ's interpretation of the regulations documented in the Basel Committee publications; "Basel 3: A global regulatory framework for more resilient banks and banking systems" (June 2011) and "International Convergence of Capital Measurement and Capital Standards" (June 2006). They also include differences identified in APRA's information paper entitled International Capital Comparison Study (13 July 2015).
Market risk	<p>The risk to ANZ's earnings arising from changes in interest rates, foreign exchange rates, credit spreads, volatility, correlations or from fluctuations in bond, commodity or equity prices. ANZ has grouped market risk into two broad categories to facilitate the measurement, reporting and control of market risk:</p> <p>Traded market risk - the risk of loss from changes in the value of financial instruments due to movements in price factors for both physical and derivative trading positions. Trading positions arise from transactions where ANZ acts as principal with customers, financial exchanges or inter-bank counterparties.</p> <p>Non-traded market risk (or balance sheet risk) - comprises interest rate risk in the banking book and the risk to the AUD denominated value of ANZ's capital and earnings due to foreign exchange rate movements.</p>
Operational risk	The risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events including legal risk but excluding reputation risk.
Past due facilities	Facilities where a contractual payment has not been met or the customer is outside of contractual arrangements are deemed past due. Past due facilities include those operating in excess of approved arrangements or where scheduled repayments are outstanding but do not include impaired assets.
Qualifying Central Counterparties (QCCP)	QCCP is a central counterparty which is an entity that interposes itself between counterparties to derivative contracts. Trades with QCCP attract a more favorable risk weight calculation.
Recoveries	Payments received and taken to profit for the current period for the amounts written off in prior financial periods.
Restructured items	Restructured items comprise facilities in which the original contractual terms have been modified for reasons related to the financial difficulties of the customer. Restructuring may consist of reduction of interest, principal or other payments legally due, or an extension in maturity materially beyond those typically offered to new facilities with similar risk.
Risk Weighted Assets (RWA)	Assets (both on and off-balance sheet) are risk weighted according to each asset's inherent potential for default and what the likely losses would be in the case of default. In the case of non-asset backed risks (i.e. market and operational risk), RWA is determined by multiplying the capital requirements for those risks by 12.5.
Securitisation risk	The risk of credit related losses greater than expected due to a securitisation failing to operate as anticipated, or of the values and risks accepted or transferred, not emerging as expected.
Write-Offs	Facilities are written off against the related provision for impairment when they are assessed as partially or fully uncollectable, and after proceeds from the realisation of any collateral have been received. Where individual provisions recognised in previous periods have subsequently decreased or are no longer required, such impairment losses are reversed in the current period income statement.
