OPTIMISING the performance of your ANZ POS Mobile terminal

Important

You should not leave your ANZ POS Mobile terminal permanently plugged into power as it will shorten the life of your battery!

The following guidelines will help you get optimum performance from your ANZ POS Mobile terminal.

- Try to avoid letting your battery run completely flat as this puts additional strain on the battery
- Recharging more frequently before the battery is completely flat will prolong the battery life
- Allow 4 hours to recharge an empty battery
- Your battery should only be charged and discharged using the ANZ POS Mobile power supply that was provided and in accordance with the instructions provided.

FAQ

Q. How many years will the battery last?

A. The ANZ POS Mobile battery will slowly degrade over time even if not in use. This is due to the nature of Lithium-Ion technology. A Lithium-Ion battery that is frequently used typically lasts between 2 to 3 years.

Q. How many hours will the ANZ POS Mobile last on a fully charged battery?

A. Over time the battery will degrade based on usage. On average, the ANZ POS Mobile can function for up to 9.5 hours in standby mode on battery supply. Note: High transaction volumes may reduce this time.

For more information regarding your ANZ POS Mobile terminal, please contact ANZ Merchant Services on 1800 039 025, available 24 hours a day, 7 days a week.
