

# Investment Option Summary

ANZ Smart Choice 2000s

30 September 2018

## Description

This investment option is designed for investors born in the 2000s. It will automatically adjust the allocation between growth and defensive asset classes to become more conservative over time. Additionally, an active asset allocation process is employed as described in 'Investment strategy' below.

## Investment return objective

Aims to generate retirement capital through returns (after fees, charges and taxes) that on average exceed inflation by at least 4.0% p.a.<sup>#</sup>, over rolling ten year periods, and preserve capital. The emphasis changes from capital growth to capital preservation as you get older.

## Investment strategy

Provides exposure to a mix of growth and defensive asset classes. The allocation to these classes will become more conservative over the longer term. Additionally, an active asset allocation process is used to increase or decrease your exposure to relevant asset classes within permitted ranges. This process is designed to optimise investment performance by adjusting allocations to markets/asset classes we believe will perform strongly or poorly in the future.

## Standard Risk Measure

The Standard Risk Measure (SRM) is based on industry guidance to allow investors to compare funds that are expected to deliver a similar number of negative annual returns over any 20 year period. The SRM for this fund is shown below:

<sup>#</sup> Please note that this percentage will vary over time as the investment option becomes more conservative.

<sup>^</sup> Listed Real Assets will include allocations to global listed property and listed infrastructure securities

Returns quoted use the unit price which is calculated using the net asset values for the relevant month end. Please note that all returns are after the deduction of investment management fees.
