Confidence surprisingly stable

- Confidence was down just 0.4% over the past week - a somewhat surprising result given the news flow. The Government's fiscal package may have contributed to the resilience.
- 'Current economic conditions' fell 9.3%, adding to a decline of 8% and 16.6% in the previous two readings. 'Future economic conditions' strengthened for the second week in a row rising 2.1%.
- Financial conditions subcomponents diverged, with 'Current financial conditions' gaining 3% while 'future financial conditions' declined 0.5%.
- 'Time to buy a major household item' fell by 0.2%, its third straight weekly loss and is at an 11-year low. The four-week moving average for 'inflation expectations' was stable at 4.1%.

ANZ-Roy Morgan Consumer Confidence and inflation expectations

Last weekend (14-15 Mar)	Weekly change, %	Four-week average	Monthly average since 1990	Inflation expectations (four-week ma)
100	-0.4%	103.4	113.1	4.1%

Data collected last weekend (Saturday and Sunday), based on around 1,000 face-to-face interviews. Not seasonally adjusted. Further data history on page 6.

ANZ Head of Australian Economics, David Plank, commented:

Despite all the gloom last week, confidence only fell marginally. It is, however, at its lowest level since 2009. This is the more important point. The weakness was predominantly due to another sharp drop in the current economic conditions subcomponent. This component is now approaching the lows seen during the GFC. The divergence between financial and economic conditions remains large. The labour market will likely determine how that gap is closed, which makes this week's employment data important. We are expecting bad news, with an outright drop in employment likely. Offsetting this may be a further stimulus package from the Commonwealth Government, which will add to the fiscal stimulus now being delivered by a number of states. The RBA is also set to cut to 0.25% and announce QE on Thursday.

Confidence decline 0.4%
